Submission ID: 158595

Timestamp: 5/4/2026 3:18 AM UTC

Name: Andrew Rhoden

Challenge ID: 200

Challenge Title: Malware Analysis: The Static Search

This report has not been published by a curator. Experience Cyber cannot vouch for its accuracy.

Scenario

DASWebs has recently become a victim of a ransomware attack, which resulted in the malfunctioning of the Fileshare and Workstation-Desk machines. Your goal is to analyze the malware that has been left on Workstation-Desk and find the password utilized to lock the zip file.

Duration

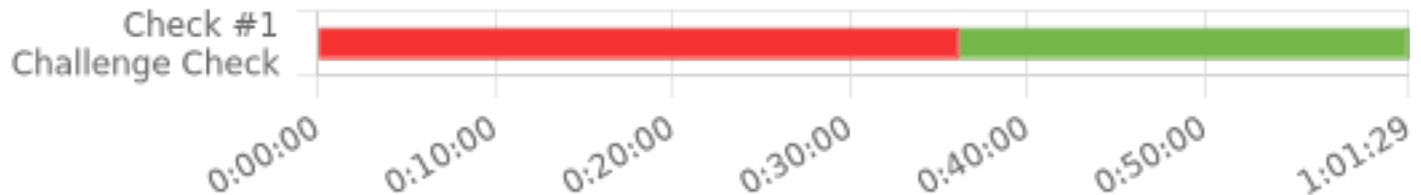

1:01

Final Check Details

✔ Check #1: Password used to encrypt network drive correctly identified.

Full Check Pass

Full: 1/1

Element

Cybersecurity

Work Role

Cyber Defense Forensics Analyst

DCWF Tasks

- 1084: Perform static malware analysis.

Knowledge, Skills, and Abilities

- 1089: Knowledge of reverse engineering concepts.
- 1087: Skill in deep analysis of captured malicious code (e.g., malware forensics).
- 1092: Knowledge of anti-forensics tactics, techniques, and procedures.
- 1096: Knowledge of malware analysis tools (e.g., Oily Debug, Ida Pro).

- 1098: Skill in analyzing anomalous code as malicious or benign.
- 1100: Skill in identifying obfuscation techniques.
- 1101: Skill in interpreting results of debugger to ascertain tactics, techniques, and procedures.
- 1158: Knowledge of cybersecurity principles.
- 1159: Knowledge of cyber threats and vulnerabilities.
- 3513: Knowledge of system administration concepts for Unix/Linux and/or Windows operating systems.
- 6850: Skill in analyzing malware.

Centers of Academic Excellence Knowledge Units

- Cybersecurity Foundations
- Cyber Threats
- Device Forensics
- IT Systems Components
- Operating Systems Concepts
- Software Reverse Engineering
- Software Security Analysis
